DM Infinity™ (Version 2) Digital Mailing System

The DM Infinity is a high volume, high speed, USPS® approved digital meter for the production mail environment. If you have an existing (Version 1) model you will require an upgrade to ensure smooth operation in your mail processing facility.

Features of the new DM Infinity Version 2

- Available as a retrofit to your existing DM Infinity platform or as a new module for your mailing operation.
- Unchanged UIC interface as the primary display for any print engine related messages means it is familiar to operators.
- A new double print engine with an enhanced design which operates at up to 26,000 print cycles per hour, consistent with the existing DM Infinity performance.
- Innovative ability to flip between print engines, ensuring continuous operation as well as maintaining the condition of the print heads.
- Dual Ink cartridges can be exchanged while in operation, ensuring no interruption to mail processing (LEDs indicate which ink cartridge needs to be changed).

Quick and easy installation

- Upgrade to your existing DM Infinity meter can be performed on-site.
- In addition to the print engine replacement some mechanical changes are required to accommodate the new ink cartridges. These are quick to install and will not affect the performance of the system
- The DM Infinity meter UIC and associated functionality remains the same as your existing DM Infinity configuration, so no operator training is needed.
- All parts will be supplied as part of your upgrade/trade-in, with your existing print engines and print heads returned to BlueCrest for responsible disposal or recycling.
- Where applicable your DM Infinity system will continue to be supported under your existing BlueCrest maintenance contract following upgrade.

Print heads and ink

- The following consumables are required for each print axis
 - 2 print heads and 2 ink cartridges
- Each ink tank holds 775ml of black ink.
- Each print head has a predicted usage comparable to current Canon print head.
- Print heads are easily and quickly replaced when needed.

Please note:

Postal Approval - The upgrade to the DM Infinity is approved for distribution by USPS under IBI Performance Criteria.

Safety and Environmental approvals - This Print Engine upgrade will not affect Safety or Environmental Approvals. Your DM Infinity will continue to meet the existing product safety and environmental standards.
