

TrueSort™ parcel sorting solution

Efficient parcel sortation in a small footprint.

The e-commerce boom has made it extremely simple to order goods online leading to an increase in the volume of parcels and packages being shipped worldwide. To keep up with demand, you need efficient solutions to sort and deliver these parcels in a timely, accurate, and efficient way. You need a TrueSort Parcel Sorting Solution from BlueCrest. TrueSort addresses the need for an integrated solution with automated dimensioning, weighing and scanning for ecommerce applications, and collection of vital parcel data in a single touch.

A compact solution

Ideal for postal service providers with low volume applications or a lower quantity of designations, TrueSort handles a variety of package types in a small footprint. Its compact in-put and configurable outsort modules are designed to maximize productivity even in constrained spaces.

One-touch data collection

In-line automation with various camera angles allows the TrueSort to simultaneously capture parcel weight, dimensions and OCR data. This provides granular data, which can be exploited for both outbound and inbound ecommerce applications.

Notable features

- Postal Barcodes, 1D and 2D code read-ing
- Industry leading Optical Character Recognition (OCR) – Optional
- Positive piece tracking to container
- Destinations from 1 to 33 carts (outsort in bags or bins possible)
- Up to 3,000 items per hour
- Powered by BlueCrest SortEngine 360 postal software

Specifications

System
